sedak ceramic-ink printing
Printing glass of unique dimensions
sedak printing know-how

Ceramic-ink digital printing or full-coverage roller-coater technique

**Colors**
The wide color range of ceramic inks contains pre-mixed and digitally mixed colors.

Permanent color brilliance of the facade

UV- and scratch-resistant

Black and white colors are „Side One“ suitable, e.g. as colors that prevent slipping.
sedak ceramic
sedak ceramic-ink printing
sedak printing know-how

Ceramic-ink digital printing or full-coverage roller-coater technique

**Durability**
Sub-micron glass frits and natural pigments are bonded to the glass during the tempering process giving ceramic inks an unmatched resistance to scratching, UV radiation and the weather.

**Sustainable Architecture**
The ceramic inks are non-toxic in its liquid and printed form making the glass fully recyclable.
roller coater

Capabilities of the ceramic roller coater

Full-coverage and single-color printing

Very homogeneous ink application

Opaque quality possible

Application e.g. with:
- roofs or canopies (sun protection)
- counter prints
# Facts & figures

## roller-coater printing (Cefla Large)

digital printing
printing options
digital printing

Capabilities

Prints based on six basic colors

Resolution up to 1024dpi

Color transitions possible

Thin lines, concentric circles, dots at different levels of intensity and opaqueness

Complex, multi-color grid designs

Frameless prints
digital printing

Advantages / strengths of digital printing

Variable thickness of color application

Transparent, opaque as well as multi-layer printing

Higher saturation due to counter print

Flexibility thanks to digital technology

Design easily and cost-efficiently reproducible (≠ screen printing)
digital printing

Possible applications

Decorative:
- Interior design
- Photorealistic designs

Functional:
- Sight protection
- Sun protection
- Printing of serial numbers and barcodes
- Black and white colors are „Side One“ suitable, e.g. for slip prevention on steps

digital printing
possible applications
double vision

Sun protection from inside – sight protection from outside

Two print layers lying exactly on one another for in diverse colors or gradients.

Basic pattern freely designable

Different appearance:
e.g. dark dots on the inside for a hardly noticeable sun and glare protection; light-color dots on the outside for sight protection inwards

sedak capabilities:
- Precise positioning before each of the two printing runs
- Double-vision technology in different patterns and colors
House of European History, Brussels

Glass expansion of a historic building
decorative application

Digital print as etching imitation
decorative application

Real stone Imitation: cost-efficient and weight reducing
decorative application

Writing for a creative facade design
decorative application

Printing with real silver and real gold
functional application

Dot grid for sight protection

dots with diameter ≥ 2 mm, distance between the dots: 1.2mm
industrial facade

Reducing solar radiation
medical sector

decorative: photo-realistic printing for an ICU

sedak ceramic-ink printing

high hygiene standards, easy to clean
