Project Management	Ralf Scheurer
Location	sedak GmbH & Co. KG

scope of work

- Use of ceramic digital printer
- 3-Fach Lamiate with SGP
- Pane size 11,50 m x 2,50 m

Beschreibung

SMM Hamburg is an international fair for naval architecture, ocean engineering and machines.

It is the trade fair for the shipbuilding industry with the largest international character. Visitors and exhibitors from all over the world represent the latest status of the shipbuilding industry worldwide and can exhibit or inform themselves extensively about the current products, innovations, trends, and services. No other fair has a comparably wide range of international exhibitors and visitors.

In order to present the latest innovations in the yacht industry in an impressive way, the GL Yachtverglasung company decided to exhibit a glass pane in 11.5 x 2.5m with the GLY-MarineCobond® system having been certified with the Type Approval.

GLY-MarineCobond® is a glass product that can be measured thinner than usual glazings by up to 45% due to its special structure causing an equal reduction in weight. Nevertheless it shows the same strength which widens the variety of possible applications in the yacht sector.

Since the glass surface for the current yacht designs is becoming ever larger, it is a pioneering aspect with great market chances.

The first sensational yacht projects have already been equipped with GLY-MarineCobond®.
